

COMPETENCY MAPPING

Title <i>STCW Table</i>	<i>Table A – III / 6</i> <i>Specifications of minimum standards of competence for electro-technical officers</i>
-----------------------------------	---

GUIDANCE NOTES

TERMS	<i>Description</i>
<i>Positive Reward</i>	<i>Score will increase in the assessment criterion / may be combined with increased gradual scoring Bonus points, an integer within the range of 0 to 100. The default value is 0.</i>
<i>Negative Penalty</i>	<i>Score will decrease in the assessment criterion / may be combined with decreased gradual scoring Penalty points, an integer within the range of 0 to 100. The default value is 0.</i>
<i>Triggered Once Single</i>	<i>A trigger is activated once. A rule is triggered in the scenario only once: the first time the conditions occur.</i>
<i>Multiple Circular</i>	<i>Assessment scoring can be started multiple times. A rule is triggered every time the conditions occur.</i>
<i>Delay Time Dependency</i>	<i>The assessment scoring can be delayed in order to give the student some reaction time, for example after a malfunction has been activated. Time dependency ruling</i>
<i>Critical Criterion Weight</i>	<i>The assessment must be achieved in order to pass the test. Multiplier of a trainee's level of competency</i>
Levels of Simulation	
<p>Familiarization - familiar with the equipment, layout procedures, and routine task</p> <p>Operational - the task relates to the inputs and outputs and their relationship and has to do with the performance of a function</p> <p>Functional - the task relates to the functions or activities performed by the system without reference to which of the elements of the system perform those functions</p> <p>Communication - relates to effective communication between human resources to report, get feedback, or to execute a task</p> <p>Emergency - task performed in circumstances where there is variation or deviation from an expected scenario or situation</p> <p>Crisis - task performed when the emergency has developed into a crisis</p>
